Card Stacking Construction Member and Teaching Aid

ABSTRACT OF THE DISCLOSURE

A card construction game and teaching tool for building a structure of cards includes a card holder having an outermost spherical surface. The card holder includes a plurality of slots disposed in spaced relation along the spherical surface, and is provided with hemispheres defined by any one of three mutually orthogonal planes. Each of the hemispheres include slots spaced equidistantly thereon, so that each of the hemispheres are symmetrical about a central axis thereof. The slots are sized and shaped to receive a portion of at least one of the cards therein, and include at least one projection configured to releasably engage the card portion disposed within the slot.
